

CONQUISTADOR OIL

Hermes-Managed Commercial Growth & Contractor Network Execution Manual
Website, Marketing Campaigns, Contractor Network, Dispatch, Cash-Flow Controls & Agent Governance

Purpose

This manual turns the Conquistador Oil strategy into an implementable operating system that can be managed by a Hermes agent while protecting margin, cash flow, contractor independence, customer ownership, and service reliability.

1. Executive Summary

Conquistador Oil should operate as an asset-light commercial fuel, heating, HVAC, contractor-coordination, marketing, dispatch, billing and back-office platform for Lancaster and Central Pennsylvania. The company should not begin by trying to own every truck, technician, license or operational burden. The stronger model is to own customer relationships, lead flow, data, billing, renewals and contractor orchestration while qualified independent contractors fulfill field work.

The plan is built to be managed by Hermes, an operating agent responsible for website updates, marketing campaigns, lead intake, CRM maintenance, contractor recruitment, document collection, scorecards, KPI reporting and risk alerts. Hermes may draft, monitor, recommend and coordinate, but it must not make legal, financial, pricing, dispatch, credit or guarantee commitments without human approval.

Core Rule
Generate cash quickly without selling promises the network cannot physically keep and without creating float that Conquistador must finance. Collect cash or secure financing before routing jobs. Protect the spread. Own the customer. Vet contractors before use.

Primary Objectives

- Reach a 70%+ commercial contract mix over 12 months, measured by annual gallon volume and recurring service contract value.
- Generate early cash through HVAC/heating service dispatch and smaller fuel runs while larger commercial accounts mature.
- Build a dense Lancaster contractor network before expanding into York, Dauphin, Lebanon or other zones.
- Use Hermes to manage daily execution, website, marketing, CRM, contractor recruitment, scorecards and risk controls.
- Prevent catastrophic failures caused by unhedged price caps, oversized guarantees, contractor poaching, misclassification, thin network coverage and negative cash conversion cycles.

2. Strategic Thesis and Final Positioning

Final Positioning

Conquistador Oil is Central Pennsylvania's commercial fuel, heating, HVAC and contractor-coordination partner for property managers, farms, institutions, industrial facilities and local businesses.

Customer-Facing Promise

One accountable point of contact for reliable fuel, heating, HVAC, emergency service coordination and vetted local contractors.

Contractor-Facing Promise

We bring commercial work, handle marketing, customer intake, scheduling support, billing and collections. You perform the field work and get paid reliably under predictable terms, with optional early-pay available when approved.

Why this positioning works

- Commercial customers want reliability, accountability, transparent pricing and fewer vendors.
- Small contractors want more work, less admin burden, better routing density and reliable payment.
- Conquistador captures value by coordinating both sides, owning the customer record and monetizing the spread.
- The market does not need another generic residential fuel company; it needs a modern commercial back-office and contractor coordination platform.

3. Business Model and Revenue Sequencing

Asset-Light Spread Model

Conquistador captures customer demand, quotes service, manages customer communication, coordinates approved contractors, invoices the customer and keeps the difference between the customer price and the contractor cost. Contractors retain their own equipment, crews, licenses, insurance and business expenses.

Revenue Layers by Speed-to-Cash

Layer	Speed	Primary Revenue	Role in Launch
Layer 1: HVAC/heating	Days	Per-job coordination spread and service	Fastest cash; urgent buyer need; validates

emergency dispatch		margin	contractor network.
Layer 2: Residential and small-commercial fuel runs	Days to weeks	Cents-per-gallon spread plus delivery/coordination fees	Creates volume, fills contractor capacity and generates early testimonials.
Layer 3: Commercial fuel and service agreements	1-3+ months	Recurring fuel margin, monthly account fees, vendor-desk fees	Long-term enterprise value and path to 70% commercial mix.
Layer 4: Property manager vendor desk	1-3+ months	Monthly fee plus service spread across multiple sites	Best scalable recurring account type once trust is established.

Launch Principle

Run all revenue layers in parallel, but expect cash in this order: emergency/service dispatch first, small fuel runs second, larger commercial agreements third. Early cash funds slower, higher-value commercial growth.

4. Hermes Operating Charter

Hermes is the operating coordinator and risk-control agent for Conquistador. It should manage information flow and execution discipline, not replace legal, financial or operational judgment.

Hermes may manage

- Website page drafts, SEO content, Google Business Profile posts and content calendars.
- CRM entry, lead classification, follow-up reminders and prospect research.
- Contractor sourcing, outreach drafts, document collection and vetting status tracking.
- Audit scheduling, proposal drafting, dispatch recommendations and customer follow-up drafts.
- Contractor scorecards, compliance alerts, KPI dashboards and daily/weekly management reports.

Hermes may not independently do

- Approve final pricing, credit terms, net terms, rebates, service credits or guarantees.
- Dispatch a contractor without required payment, compliance and margin checks.
- Approve a contractor before vetting is complete and human review is documented.
- Make legal representations, licensing claims or insurance promises.
- Offer unhedged price caps, never-run-out promises or hard 4-hour SLA claims without zone readiness and human approval.

5. Human Approval Matrix

Activity	Hermes Authority	Human Approval Required
Draft website/SEO content	May draft and queue for review	Before publishing high-risk claims, guarantees, pricing or licensing language.
Send routine lead follow-up	May send approved templates	For custom pricing, legal terms, credit terms or service guarantees.
Classify leads and update CRM	May do automatically	Only if deleting/merging records or changing account status to contracted.
Contractor outreach	May send approved outreach scripts	Before sending agreements, rate schedules or onboarding approval.
Contractor vetting	May collect and verify document status	Human must approve final contractor status.
Quote preparation	May calculate draft based on rules	Human approves final customer quote.
Dispatch recommendation	May recommend best contractor	Human approves dispatch during first 90 days or any high-risk job.
Customer payment terms	May flag missing payment method	Human approves any net terms, waiver or exception.
Ad budget management	May recommend changes	Human approves budget increases, new campaigns and aggressive claims.
Service credits/guarantees	May flag eligibility	Human approves all credits, payouts and guarantees.

6. Non-Negotiable Guardrails

Guardrail	Rule	Hermes Block/Escalation
No unhedged price caps	Fuel defaults to transparent index-plus-margin. Caps require supplier/hedge backing and approval.	Block any price-cap promise unless approved documentation is attached.
No oversized guarantees	Service credits must be bounded and sized against account margin/reserve.	Escalate any guarantee exceeding one month of expected spread or reserve coverage.
No premature 4-hour SLA	Hard 4-hour SLA only in Green/Gold zones with 2+ contractors and proven performance.	Block 4-hour marketing language in Red/Yellow zones.
Customer payment first	No job routed unless payment is collected, authorized,	Block dispatch if payment status is unresolved.

	financed or terms-matched.	
Vetting before signing/approval	Contractor must clear required documents before approved status.	Block active routing until compliance checklist is complete.
Customer ownership stays with Conquistador	All communications, billing, quotes, renewals and records stay in Conquistador systems.	Escalate direct contractor solicitation or off-platform customer communication.
Protect contractor independence	Contractors use own equipment, serve others, bear expenses and are paid per job/account terms.	Escalate any workflow that looks like employee control.

7. Website and SEO System

Website Objective

The website should convert commercial and high-intent local demand into audit requests, urgent service coordination requests and contractor partner applications. It should not present Conquistador as a licensed provider of every service unless that is legally accurate. It should present Conquistador as a commercial fuel, heating and contractor coordination partner.

Core Website Pages

- Home: Commercial Fuel, Heating & Contractor Coordination for Central Pennsylvania Businesses.
- Commercial Fuel Delivery Lancaster PA.
- Emergency HVAC and Heating Service Coordination.
- Property Manager Vendor Desk.
- Farm Fuel and Heating Support.
- Off-Road Diesel Delivery Central PA.
- Job-Site Fuel Support.
- Contractor Partner Program.
- Commercial Fuel and Vendor Audit.
- Service area pages for Lancaster, York, Harrisburg, Lebanon, Ephrata, Lititz, Manheim, Columbia and Mount Joy.

Website Calls to Action

CTA	Purpose	Destination
Request a Free Commercial Fuel & Vendor Audit	Build Layer 3 commercial pipeline	Audit intake form and scheduling.
Request Emergency Service Coordination	Capture fastest-cash urgent demand	Urgent intake with payment-method requirement.
Become a Contractor Partner	Build supply-side network	Contractor application and vetting checklist.
Request Commercial Fuel Pricing	Capture qualified commercial fuel prospects	Commercial quote intake form.

Do Not Say: Prohibited Website and Ad Claims

Prohibited Claim	Why Risky	Approved Alternative
Guaranteed lowest price	May be false, invites price war and legal complaints.	Transparent commercial pricing and clear account review.
Never run out of fuel	Absolute promise creates catastrophic liability.	Priority fuel planning and proactive scheduling in covered areas.
4-hour emergency response	Unsafe unless zone readiness supports it.	Priority same-day coordination where available.
Price cap / budget protection	Creates fuel-price exposure unless hedged/supplier-backed.	Index-plus-margin pricing or approved supplier-backed options.
Our technicians/employees	Misclassification and licensing risk if contractors perform work.	Vetted local contractor partners.
Fully licensed HVAC provider	May be inaccurate if Conquistador is coordinating not performing work.	Coordinated HVAC service through qualified contractor partners.
Fully insured by Conquistador	Could misstate insurance coverage.	Contractor partners must maintain required insurance.

8. Marketing Campaign System

Campaign 1: Emergency HVAC and Heating Coordination

Purpose: generate fast cash through urgent service demand. Target high-intent terms such as emergency HVAC Lancaster PA, oil burner repair Lancaster PA, heating service Lancaster PA and no heat commercial building Lancaster PA. Hermes should immediately escalate urgent requests to a human operator, confirm payment status and recommend an approved contractor.

Campaign 2: Commercial Fuel and Vendor Audit

Purpose: build the larger commercial contract pipeline. Target property managers, farms, churches, schools, warehouses, small industrial users, construction companies and hospitality operators. Offer a free 15-minute Commercial Fuel and Vendor Audit.

Campaign 3: Contractor Partner Recruitment

Purpose: build supply-side capacity. Target small independent fuel haulers, HVAC operators, oil burner technicians, tank service companies, generator service providers and commercial repair contractors. Lead with reliable work, admin offload, zero-cost job routing and predictable payment terms.

Campaign 4: Property Manager Vendor Desk

Purpose: build recurring multi-site revenue. Position Conquistador as one point of contact for fuel, heating, HVAC, tank, generator and maintenance coordination across multiple properties.

Weekly Channel Mix

Channel	Weekly Activity Floor	Hermes Management Task
Direct outbound email	150 targeted sends	Personalize, track replies, schedule audit calls.
Phone outreach	75 calls	Prioritize property managers, farms, contractors and facilities managers.
Google Business Profile	3 posts/updates	Publish service-area, emergency and commercial audit posts.
SEO content	1 page or article	Target commercial and service-area keywords.
Contractor recruitment	50 touches	Source, contact, follow up, collect documents.
Paid search	Limited test budget	Monitor CPL, lead quality, negative keywords and ad claims.

9. Contractor Recruitment System

Target Contractor Profile

- Independent fuel haulers with 1-3 trucks, local routes and excess capacity.
- Small HVAC/oil burner service operators with 2-5 vans, strong field competence and weak B2B marketing.
- Tank, generator, plumbing and emergency repair contractors that can support commercial accounts.
- Owner-operated or family-run companies that value route density, admin offload and reliable payment.

Contractor Value Proposition

Contractor Pain	Conquistador Offer	Cash-Flow Safe Revision
Net-60/90 receivable chasing	Reliable payment under predictable terms	Default net-30 or after account settles; optional early-pay at discount.
High marketing cost	Zero-cost job routing	No upfront contractor marketing fee.
Admin burden	Back-office support	Conquistador handles customer intake, invoicing, scheduling support and collections.
Idle capacity	Clustered routed jobs	Focus on dense zones to reduce deadhead time.
Slow seasons	Year-round routed volume	Layer service work, small fuel runs and commercial accounts.

Recruitment Script

Contractor Outreach Script

Hi [Owner Name], this is [Name] with Conquistador Oil in Lancaster. We are building a vetted local contractor network for commercial fuel, heating and HVAC support. We bring in the customer, handle intake, scheduling support, billing and collections, and route approved work to trusted local partners. We pay reliably under agreed terms, and optional early-pay is available when approved. I am not asking you to sign anything today. I would like to see whether your company has capacity for additional commercial work in your

service area. Would a 10-minute call next week make sense?

10. Contractor Vetting and Onboarding

Four-Stage Onboarding Pipeline

Stage	Purpose	Required Completion
Stage 1: Vet First	Verify business, permits, insurance, certifications, references and equipment compliance.	Must clear before any approval or active routing.
Stage 2: Sign	Execute ICA, non-circumvention, SLA, rate schedule and W-9.	Only after Stage 1 clears.
Stage 3: Setup	Create portal/CRM profile, service zones, reporting workflow, payment terms and contact rules.	Before test job.
Stage 4: Test and Activate	Route low-risk test job, score performance and confirm documentation.	Required before active status.

Vetting Checklist

- Business registration verified.
- PA Fuel Transporter Permit verified where applicable.
- EPA Section 608 certification verified for HVAC work where applicable.
- Commercial general liability insurance certificate on file.
- Workers compensation insurance certificate on file where applicable.
- Conquistador listed as additional insured where required.
- Weights and Measures certification for delivery truck meters where applicable.
- Three commercial references checked and documented.
- Service areas and emergency availability mapped.
- Rate sheet and payment terms agreed.
- W-9 collected.
- Test job completed and scored.

11. Contractor Scorecard, Kill Switches and Network Readiness

Contractor Scorecard

Category	Points	Measurement
Response time	20	Acknowledges dispatch and confirms arrival window within required timeframe.
On-time completion	20	Completes job within SLA phase for the zone/trade.
Customer satisfaction	20	Customer feedback, complaint rate and repeatability.
Documentation/reporting	15	Uploads delivery tickets, service reports and notes promptly.
Pricing consistency	10	Matches agreed rate sheet or obtains pre-approval for changes.
Professionalism	10	No direct marketing, clean site conduct, proper communication.
Compliance status	5	Insurance, permits and required documents current.

Contractor Kill Switches

Trigger	Hermes Action	Human Action
Insurance expires or missing	Auto-suspend routing recommendation	Review reinstatement only after valid COI.
Required permit/certification expires	Auto-suspend relevant trade/zone	Verify renewed permit/certification.
Attempts to bypass Conquistador	Flag critical; stop new routing	Review non-circumvention enforcement.
Two SLA misses in 30 days	Move to probation	Determine corrective action or removal.
Serious safety/legal incident	Immediate suspension	Counsel/insurance review.
Fails to upload required documentation	Hold future routing	Require retraining or removal.
Unauthorized price changes	Flag margin risk	Review rate sheet and contractor status.
Score below 70	Probation	Performance review and route reduction.

Zone Readiness System

Zone Status	Readiness Standard	Marketing/Operations Allowed
Red Zone	Fewer than 2 vetted contractors for trade/zone.	Only general priority coordination language; no hard SLA.

Yellow Zone	2 vetted contractors but fewer than 10 successful jobs or limited performance history.	Priority same-day language may be used with human approval.
Green Zone	2+ vetted contractors, 10+ successful jobs, 90%+ on-time performance.	Stronger SLA language allowed; 4-hour may be considered for select accounts.
Gold Zone	3+ contractors, proven emergency coverage, strong margin history, low complaint rate.	4-hour SLA may be offered only under written agreement and bounded service credit.

12. Dispatch and Service Coordination

Pre-Dispatch Checklist

1. Customer record exists in CRM with contact, site address and service request details.
2. Customer payment is collected, authorized, financed or terms-matched.
3. Expected gross spread is calculated and meets minimum margin rule.
4. Selected contractor is approved, compliant and authorized for the trade and zone.
5. Zone status supports any promise made to the customer.
6. Contractor has not triggered a kill switch, probation restriction or compliance block.
7. Human approval is recorded during the first 90 days or for any high-risk job.
8. Customer receives Conquistador-branded confirmation and contractor receives job details.

Dispatch Recommendation Logic

Hermes should recommend the contractor with the best combination of service zone, trade authorization, compliance status, response availability, contractor score, margin, documentation history and customer fit. Hermes should not route work based only on lowest contractor cost because quality failures and customer poaching can destroy the spread.

13. Finance, Pricing and Positive Cash-Flow Rules

Customer Collection Rules

- Residential and small-commercial: valid card or ACH on file before dispatch; charge at or before service whenever practical.
- Emergency jobs: no dispatch without authorized payment method or human-approved exception.
- Larger tickets: use third-party financing where available so Conquistador is funded quickly and does not carry customer float.
- Established commercial accounts: net terms only after payment history is proven and matched to contractor terms on that account.
- No net-60/net-90 exposure unless specifically approved and supported by working-capital capacity.

Contractor Payment Rules

- Default contractor terms should be net-30 from completion or X days after the account settles.
- Fast-pay is an optional priced feature, not a default promise; any early-pay discount should be modeled as a margin line.
- Contractor terms should never be faster than customer cash collection unless reserve funds or human approval covers the float.
- Hermes must flag any job where contractor payment is due before customer funds are secured.

Pricing Guardrails

- Fuel defaults to transparent index-plus-margin pricing.
- No unhedged price cap or symmetric cap promise.
- All jobs require a minimum target spread before approval.
- Financed jobs must clear minimum spread after merchant/financing fees.
- Free hardware and concierge support only when account size, contract term and expected margin justify the cost.

Cash-Flow Rule

No job should be routed unless Hermes confirms customer funds are collected, authorized, financed or contractually matched to contractor payment terms. Growth should generate cash, not consume it.

14. Minimum Margin and Offer Rules

Offer/Job Type	Minimum Rule	Notes for Hermes
Emergency HVAC/heating dispatch	Minimum \$75-\$150 gross spread per job or approved percentage spread.	Escalate if customer urgency pushes margin below floor.

Small fuel delivery	Minimum cents-per-gallon spread plus delivery/coordination fee.	Do not accept low-volume run if travel/coordination erases spread.
Commercial fuel account	Minimum annual gross spread target based on gallons and service burden.	Include reporting, billing, payment timing and service risk.
Tank monitor included	Allowed only above minimum annual volume or multi-year term.	Model hardware, installation, cellular and admin costs.
Property manager vendor desk	Monthly fee plus spread on services.	Fee should cover coordination burden even before service work.
Financed larger job	Must clear minimum spread after financing/merchant fee.	Use financing to remove float, not to hide poor margin.
Service credit eligible account	Credit capped by contract and account margin/reserve.	No double-your-money-back or uncapped disruption guarantee.

15. Customer Lead, Audit and Proposal Workflow

Lead Intake Workflow

9. Lead enters through website, phone, GBP, ad, email or referral.
10. Hermes classifies the lead: emergency, fuel, HVAC, audit, contractor, property manager, farm, industrial, residential or other.
11. Hermes checks service area, zone readiness, offer rules and payment requirements.
12. Hermes collects missing details and creates/updates the CRM record.
13. Hermes recommends next action: urgent escalation, audit scheduling, contractor application, quote preparation or follow-up.
14. Human approves quote or dispatch where required.
15. Hermes sends approved customer communication and logs outcome.
16. Hermes follows up after service and offers recurring agreement where appropriate.

Commercial Fuel and Vendor Audit

Audit Question Area	Details to Collect	Proposal Use
Facility profile	Location, use type, square footage/sites, operating schedule.	Segment account and identify service risk.
Fuel usage	Fuel type, annual gallons, tank sizes, seasonality.	Estimate annual margin and delivery schedule.
Current vendors	Fuel, HVAC, tank, generator, plumbing, maintenance.	Identify consolidation and vendor-desk opportunity.
Payment terms	Current terms, method, approval process.	Match payment policy and avoid float.
Service pain	Run-outs, slow response, tenant complaints, downtime.	Position reliability and coordination value.
Multi-site potential	Number of sites/properties and decision process.	Build portfolio proposal.

16. Customer Ownership Protocol

The spread model only works if Conquistador owns the customer relationship. Hermes must enforce this protocol across CRM, contractor instructions, customer communications and post-job follow-up.

- All quotes, invoices, service confirmations, complaint intake, renewals and follow-ups come from Conquistador.
- Contractors may communicate with customers only about job-site logistics unless Conquistador approves otherwise.
- Contractors must not distribute their own business cards, invoices, marketing materials or direct pricing to Conquistador customers.
- All customer data, contact records, service history, pricing and renewal dates stay in Conquistador systems.
- Any contractor attempt to solicit or accept direct business from a routed customer is a critical escalation event.
- Hermes should audit communications and job notes for signs of off-platform customer leakage.

17. Legal Document Checklist

Document	Purpose	Status Before Launch
Commercial Master Service Agreement	Customer terms, scope, payment, service credits, subcontractor use and limits.	Required. PA counsel review.
Independent Contractor Agreement	Defines contractor relationship, independence, payment and responsibilities.	Required. PA counsel review.
Non-Circumvention / Non-Solicitation Agreement	Protects customer ownership and spread.	Required. Narrowly drafted to routed accounts.
Service Level Agreement	Defines phased response standards by zone readiness.	Required before active routing.
Rate Sheet / Wholesale Schedule	Locks contractor pricing assumptions.	Required per contractor.
Customer Payment Authorization	Card/ACH and payment method rules.	Required before dispatch.

Service Credit Policy	Bounds guarantees and credits by margin/reserve.	Required before any guarantee.
Contractor Onboarding Packet	Checklist, portal instructions, documents and expectations.	Required before recruitment scale.
Privacy Policy and Website Terms	Lead data, disclaimers, website use.	Required before website launch.
Financing Partner Merchant Agreement	Large-ticket financing if used.	Required before offering financing.
Insurance Review Memo	Confirms coverage gaps and additional insured requirements.	Recommended before jobs.

18. Daily, Weekly and Monthly Hermes Routines

Daily Morning Routine

- Review new leads, missed calls, forms and urgent service requests.
- Check contractor availability, compliance expirations and active job status.
- Review payment status for any pending dispatch.
- Prepare daily call/email/follow-up list for prospects and contractors.
- Flag high-risk decisions requiring human review.

Daily End-of-Day Routine

- Summarize leads, jobs, revenue, contractor activity and risks.
- Update CRM stages and contractor statuses.
- List tomorrow's priorities.
- Escalate any payment, compliance, margin or customer complaint issue.

Weekly Routine

- Produce KPI report each Friday.
- Recommend best-performing marketing channels and campaigns.
- Identify contractors to prioritize, retrain, suspend or remove.
- Identify stuck prospects and accounts ready for recurring agreement.
- Update SEO/content calendar and contractor recruitment list.

Monthly Routine

- Review commercial share of contract value and gallon volume.
- Review contractor network depth by zone and trade.
- Review receivables aging and cash conversion cycle.
- Review ad spend, CPL, booked audits and closed accounts.
- Review legal/compliance items and update guardrails.

19. First 30 Days Implementation Plan

Week	Operating Priorities	Success Gate
Week 1	Set up CRM, website structure, forms, contractor database, pricing rules, payment method rules and approval matrix. Engage PA counsel on documents.	Core systems exist; no risky claims published.
Week 2	Build Lancaster contractor shortlist, launch contractor outreach, publish basic website/GBP pages, begin audit outreach.	First serious contractor conversations and prospect list live.
Week 3	Collect contractor documents, pre-screen first partners, launch emergency/heating coordination campaign, book audit calls.	At least 2 contractors in vetting and payment workflow defined.
Week 4	Route first low-risk jobs if compliance/payment/margin checks clear; collect testimonials; offer recurring agreements to satisfied customers.	Routed jobs completed, contractors paid under agreed terms, no unsafe guarantees.

20. 60-Day, 90-Day and 12-Month Scale Plan

Days 31-60

- Increase approved/in-vetting contractor network to 5-8 contractors.

- Establish at least one Lancaster Yellow/Green service zone.
- Complete at least 10 routed jobs and 10 commercial audits.
- Send first commercial service agreement proposals.
- Launch limited paid search only for high-intent emergency and commercial keywords.
- Begin property manager vendor-desk outreach.
- Review margin by job type and adjust minimum spread rules.

Days 61-90

- Increase contractor network to 8-12 approved or late-stage contractors.
- Expand to York/Dauphin/Lebanon only if Lancaster workflow is stable.
- Convert satisfied transaction customers into recurring agreement offers.
- Create first case study and commercial proof points.
- Review legal, insurance, contractor classification and customer contract practices.
- Build guarantee reserve only for approved bounded service credits.

12-Month Goal

- Move toward 70% commercial contract value measured by gallon volume and recurring agreement value.
- Develop multi-property property manager accounts and farm/ag programs.
- Build Green/Gold zones before offering stronger SLAs.
- Negotiate better contractor rates based on proven volume and route density.
- Evaluate acquisition, financing or ESOP-ready structure only after operational KPIs are stable.

21. KPI Dashboard and Reporting

KPI	Why It Matters	Cadence
New leads by source	Shows which channels generate demand.	Daily/Weekly
Emergency jobs routed	Tracks fastest cash layer.	Weekly
Gross spread by job type	Confirms margin survives fulfillment.	Weekly
Customer funds secured before dispatch	Protects cash-flow positive design.	Daily
Contractors contacted/interested/vetted/approved	Measures supply-side funnel health.	Weekly
Jobs routed per active contractor	Shows contractor network utilization.	Weekly
Average contractor score	Measures quality and risk.	Weekly
Zones by readiness status	Controls marketing promises and expansion.	Monthly
Commercial audits booked/completed	Tracks long-term pipeline.	Weekly
Proposals sent and won	Measures sales progression.	Weekly/Monthly
Commercial share of gallon/contract value	Primary strategic target.	Monthly
Receivables aging and contractor obligations	Prevents float surprises.	Weekly
SLA misses/complaints/kill switches	Protects brand and customer retention.	Weekly

22. Risk Register and Escalation Rules

Risk	Primary Control	Escalation Trigger
Fuel price exposure	Index-plus-margin default; no unhedged caps.	Any request for price cap, fixed pricing or downside protection.
Oversized guarantee	Bounded service credits tied to account margin/reserve.	Any proposed guarantee exceeding margin/reserve.
Negative cash conversion	Customer funds secured, financed or terms-matched before dispatch.	Contractor due before customer funds.
Thin network	Zone readiness system and phased SLA.	Request for hard SLA in Red/Yellow zone.
Contractor poaching	Non-circumvention, customer ownership protocol, CRM control.	Contractor contacts customer directly to solicit.
Misclassification	Independent contractor boundaries and counsel review.	Workflow controls hours, exclusivity, equipment or expenses.
Poor service quality	Scorecards, test jobs, kill switches.	Score below 70, repeated misses or serious complaint.
Compliance lapse	Document expiration tracking and auto-suspension.	Expired insurance, permit or certification.
Ad/website claims risk	Do Not Say rules and approval matrix.	Guarantee, licensing or pricing claim in draft.

23. Master Hermes Prompt

Permanent Hermes Operating Prompt

You are Hermes, the operating agent for Conquistador Oil in Lancaster, Pennsylvania. Your job is to manage the website, marketing campaigns, CRM, commercial lead pipeline, contractor recruitment, contractor vetting, contractor scorecards, operational follow-up, cash-flow checks and KPI reporting. Your highest priority is to generate revenue safely while protecting Conquistador's spread, customer relationships, contractor independence, cash flow, legal posture and brand reputation. You must never offer unhedged price caps, unlimited guarantees, double-your-money-back guarantees, never-run-out promises or 4-hour response promises unless the zone has verified readiness and human approval. You must never approve a contractor before full vetting is complete. You must never allow contractors to own the customer relationship. You must escalate legal, pricing, guarantee, insurance, payment, environmental, safety, employment-classification or compliance risks to a human. Your daily goals are to generate qualified leads, recruit and vet contractors, schedule audits, support routed jobs, track margins, follow up with prospects, update website and SEO content, maintain CRM accuracy and produce daily and weekly management reports.

24. Source Basis and References
